Summary

Software Engineer specialized in web scraping and back-end development. Experienced in AWS deployments, CI/CD, and both SQL/NoSQL databases. Expert in developing advanced anti-bot bypasses. Currently expanding expertise in Reverse Engineering complex JavaScript to tackle highly obfuscated web environments.

Education

Industrial Organization School (EOI), Bootcamp in Full Stack Web Programming – Madrid, Spain (Remote) — Sept 2021 – Dec 2021

- Technologies: HTML, CSS, JavaScript, Node, Go, MySQL, MongoDB, Docker, Linux, CI/CD, Git, DigitalOcean

University of Las Palmas de Gran Canaria (ULPGC), BS in Telecommunications Engineering – Gran Canaria, Spain — Sept 2012 – July 2019

- GPA: 7/10
- Technologies: Java, Matlab, C, Assembly, MySQL

Experience

Web Scraping Engineer, Vumi.io – Asturias, Spain (Remote) — Nov 2024 – Nov 2025

- Integrated and maintained scrapers to obtain financial data from banks or brokers.
- Reverse engineered complex javascript using DevTools to automate MFA/2FA/JWT/OAUTH2 authentication flows.
- Configured Selenium Grid and Scrapoxy (proxy network), on AWS EC2 with Docker, and Github Actions via SSH.
- Conected Playwright with Selenium Grid to support browser-based distributed and parallelized scraping tasks.
- I used AWS, that is, Lambda with Serverless architecture for scalable scraping, CloudWatch for observability, and S3 for CSV and JSON storage.
  - Implemented advanced bypass solutions for hCaptcha, reCAPTCHA, and anti-bot systems.
- Extracted information from the DOM, APIs, or PDFs.
- Technologies: Burpsuite, Devtools, Scrapoxy, Selenium Grid, Linux, Docker, Git, AWS, PostgreSQL, Github Actions, Playwright, Pandas, Redis, Pytest

Web Scraping Engineer, Tirant Lo Blanch – Valencia, Spain (Remote) — Feb 2023 – Nov 2024

- Integrated and maintained spiders to obtain legal data from government websites in Spain, Portugal and LATAM.
- Maintained a legacy project, written in the grails framework (groovy).
- Configured Selenium Grid on AWS EC2 to scale the browser infrastructure, integrating a Tor Service proxy network for anonymized web scraping.
- Engineered a rotating proxies/headers system to avoid bans.
- Extracted data from the DOM, APIs, and blueprinted a dedicated system for parsing information from PDF, DOC, and DOCX files.
- Used AWS S3 for PDF storage.
- Implemented the scraping project's CI/CD with Gitlab CI via SSH.
- Technologies: Scrapy, Selenium Grid, Grails, MongoDB, Git, Linux, Docker, Gitlab CI, Amazon Web Services (AWS)

Back-end Developer, TuCalendi – Tenerife, Spain (Remote) — Mar 2022 – Dec 2022

- Migrated and deployed an API from PHP (Codeigniter) to Python, using the FastAPI framework.
- Designed and developed conversational voice applications for Amazon Alexa.
- Technologies: FastAPI (Python framework), MariaDB, Linux, Git, Plesk, PHP, Docker, Github Actions, Postman, Pytest

Computer Technisian, Tías Town Hall – Lanzarote, Spain — Mar 2021 – Sept 2021

- Technical support to employees and automation of cadastral downloads.

Final Degree Project, University of Las Palmas de Gran Canaria – Gran Canaria, Spain — Feb 2018 – July 2019

- Engineered a system to classify atmospheric sound events combining Machine Learning and Direction of Arrival techniques, using Matlab.
